Making the right decision should be easy!

We strongly believe that making the right decision should be easy for the end consumer. It is important to us that everyone in the food chain takes their responsibility. We contribute with our knowledge of packaging; how they are being produced, used and re-used in the best way.

We urge the entire industry to join us in contributing to a circular economy where raw materials are seized and reused in a continuous scale.

Grey is the new green!

Tips for a sustainable packaging

Use a homogeneous material to make the recycling of the packaging easier

A package made of sustainable materials saves resources and raw materials

Making the right decision should be easy, inform how the packaging is best

Choose the right material

When choosing packaging, it's important to keep in mind that it should suit the contents. Is it food that is particularly sensitive, a beverage meant to be enjoyed straight from the bottle, or a high-density construction product that becomes heavy in larger volumes?

Is the product chemical-based or corrosive, requiring UN-approved packaging (safe for transporting dangerous goods)? Packaging plays a vital role in protecting the product and extending its shelf life. It also serves as a key communication tool, offering guidance to the end consumer in-store.

There are many factors to consider when selecting the right packaging. That's where we come in with long experience and broad expertise. We're here to help.

POLYPROPEN (PP)

PP is a durable material that can handle most products. It can also be adapted with freee-grade materials and other special features.

The recycled alternatives come either from industrial sources or from consumers and are known as PIR (Post-Industrial Recycled) and PCR (Post-Consumer Recycled). These materials rarely turn out completely white, as some color streaks from the recycled plastic granulates may appear. We consider these beauty marks a clear sign of a conscious and responsible choice.

POLYETEN (PE)

PE (or HDPE) is a material well suited for both food and chemical products. It withstands a wide range of challenging temperatures. A softer version, LDPE, is also available and is best suited for squeezable packaging.

Recycled PE is known as rPE and is typically handled in the same way as PP. There is also bio-based PE, which is derived from sugarcane. Packaging made from recycled materials often has a more beige or grey tone.

POLYETENTEREFTALAT (PET)

PET is naturally a transparent plastic, which can be beneficial as it allows the contents of the packaging to be visible. It is food-approved and offers strong durability thanks to its low permeability.

The recycled version of PET is called rPET (Recycled PET). It is food-approved and typically has a slightly grey tone, which can be adjusted depending on the percentage of recycled material used.

Plastic buckets

We are a leading supplier of plastic packaging and have a wide range of round, oval, rectangular and square plastic buckets. No matter which volume you're looking for, we have the right bucket for you. We will adjust the bucket after your product and your needs with different special features and possibility to print.

Plastic buckets

The widest range of buckets in Europe

Packaging of the future is recycled! Plastic buckets are increasingly being produced in recycled plastic that either comes from the industry or from the consumers. We offer these buckets in a beige/grey color as well as dyed in a darker tone. Finished with a print and a matching lid/handle the bucket will be both good looking, innovative and sustainable.

Plastic jars

A packaging with many possibilities

Our plastic jars are available in several different designs. We offer plastic jars made of PP, PE and PET-material. For most models it is possible to get a print on both the jar and the lid.

We can help you if you need a plastic jar that is adapted for a certain cause. We have, among other designs, created a unique jar which is specifically suited for the SRS-trays that are used in the food industry.

Plastic canisters

To transport a product safely you will need a packaging that is both durable and dense. We offer you a large assortment of canisters in several sizes and designs that can withstand most things. As of recently we also offer a selection of canisters in a recycled material.

---○ Available with childproof cap

---○ A natural colored packaging makes the contents visible

Plastic canisters

Durable exterior for important interior

Our large range of plastic canisters meets your needs. The volumes range from 1 liter all the way to 25 liters. We offer both standard canisters and stackable ones.

As a new addition we also offer a selected range of PET-canisters. To make the ultimate green choice we also offer specific models in recycled PET (rPET) or PE (rPE).

Choose a print to get
your bucket more
unique and stylish

Metal packaging

Packaging for wearing content

A tin bucket is a very durable packaging that resists most types of contents. Our tin buckets are stable, robust and can be UN-approved. Aside from tin buckets we also offer smaller volumes in the shape of tin canisters. If you require even bigger volumes we offer several tin pails with different solutions for top closure.

If you order a larger amount of tin buckets you can also choose to get the buckets printed. We offer several different options with lug lid, locking ring, flex-spout, paints, etc.

Pails

Transport packaging for larger volumes

We offer plastic plates as transport packaging. These are available in different designs to suit your product, fill line and production chain in the best way possible. The plastic pails are available in sizes ranging from 30 liters to 220 liters and we offer two different types of openings.

Pails

Product	Volume	Height (mm)	Width (mm)
S-DSI OPEN HEAD			
S-DSI 30	30 L	315	520

Print

Using a print is a great way to make your packaging stand out. For an outstanding result, match the color of the packaging with the print. It can also be nice to choose a colored lid or handle to match the print.

*We will help you from idea
to finished product!*

Choose the right printing method

IML

The In-mold labeling (IML) printing method works by weaving the IML label into the actual manufacturing and thus becomes a part of the packaging.

This printing method has an unbeatable quality and color reproduction. The prints are based on both CMYK and Pantone-colors. You can also make additional choices regarding the pressure for oxygen barrier, sun proofed prints, specific lacquers etc.

Well suited for our buckets and jars, you can even get the lid printed with IML-print.

DIGITAL

A digital print is printed directly on the packaging through a completely digital process, from computer to printing machine.

The biggest advantage to this method is that it is possible to print smaller quantities. If the prints change often this is a great benefit.

For digital printing, only CMYK colors apply.

Perfect for plastic buckets of different kinds and for the prints that change frequently.

SCREEN

Screen printing uses stencils which are easy to adapt after the shape of a packaging.

Because of this, the screen printing method is well suited for plastic bottles.

Screen printing only uses Pantone-colors.

This printing method is perfect when printing on our bottles, no matter what shape it is.

Use coloring and print to
create a nice series

---○ Smart refill function

PHASE 1

An idea takes shape

We turn your idea into reality. In stage one we brainstorm ideas and come up with a good concept.

The idea will be adjusted after your needs and based on these we will come up with a simpler sketch. This is where the first sketches of your new unique packaging are created.

PHASE 2

Models & processing

Now it's time to develop models and samples based on the drawings. Does anything need to be adjusted?

The packaging will be refined and changed to meet your expectations in the best way possible. At this stage it's common to have a final 3D-model of the packaging.

PHASE 3

Ready for delivery!

Once your unique tool is created the packages will be produced according to your wishes.

Finally we will deliver your packages so that you will be able to use them in your business according to the vision that started the project in the first place.

Your own design

The way to your unique packaging!

This is a suggestion of a PET-bottle, you can create your own tool out of several of our packages. Let us know if you would like to learn more.

INSPIRATION

Food

Tips for food packaging

- rPET (Recycled PET) is naturally approved for food
- Use a seal to assure the end consumer that the packaging is unbroken when it is in the store
- Think about the function, does a bottle have to be squeezable?
- Which opening is best suited for the purpose of the packaging?

INSPIRATION

Construction & paint

Tips for the construction industry

- A lid with a built-in trough function is a smart solution for a paint bucket!
- If the packaging will be used outside in the wintertime, use a freezable material.
- Printing directly on the package will give it an exclusive look
- Printing directly on the packaging gives an exclusive expression

Smart two-component function

INSPIRATION

Chemistry

Tips for chemical contents

- Is it important that the remaining contents of a packaging are visible?
- Use a dosage cap
- Should the packaging have a childproof cap?
- Recycled buckets and bottles work well for chemical products

INSPIRATION

Skincare & Pharma

Tips for skincare packaging

- Recycled material is excellent for skincare!
- A colored packaging protects against UV-light
- We suggest using refill-solutions for a more sustainable packaging
- Use a transparent packaging to display nice contents

INSPIRATION

Feed & nutrition

Tips for animal feed & nutrition packaging

- Use a cap with the right dosage amount
- A smart spray/sprinkle-function is great for fertilizer and feed
- A quickpack lid on your bucket makes everyday life easier
- Smaller plastic buckets are well suited for vitamins and candy for animals

100% recycled ♻
